Device Management Software (Optional)	The envisioned platform is an integrated device management and monitoring software designed for Interactive Flat Panel Displays (IFPDs), offering comprehensive features for usage tracking, application management, and error monitoring. The system provides a centralized dashboard for real-time visibility into device statuses, including daily, weekly, and monthly usage breakdowns, online/offline categorization, and notifications for malfunctions or disconnections. It enables remote installation and uninstallation of applications with detailed logs, incorporates intelligent app blocking to prevent the removal of critical applications, and issues alerts for unauthorized activities or devices breaching predefined geo-fencing boundaries. The platform also ensures secure cloud-based synchronization of usage details with user-based authentication, while push notifications inform users of system online status. The overarching goal is to offer a robust solution that combines hardware integration, software development, and cloud infrastructure to provide a secure and efficient IFPD management experience.
